Notes:

At 5:40, of the video, on the slide testing with multiple clients. i forgot to mention that those too tests were done with -n as the number of requests and -c as concurrent clients.

In the left image we measured response time of a 32KB - 10MB file, with concurrency, Eg. 32kb -n 10 -c 10 , 64KB -n 20, -c 20 .....

And in the right figure we had only number of concurrency and number of requests to simulate multiple user behavior of our app. Also test on the right was affected by first load penalty whereas we eliminated that in the test on the left.

-n and -c, REST and SOAP

REST and SOAP
